

Continuous liquid seed treaters

Types	Capacity
W.N. 15 sfc	5 – 15 t/h
W.N. 30 sfc	10 – 30 t/h

Description

- High quality treatment in continuous operation
- Suitable for all common cereals as well as for legumes
- Standardized treating process
- Electronic dosing technology for seed and chemical liquid for a perfect treating grade
- Free selection of liquid dosing units during automatic operation
- Optimal seed to seed distribution
- Homogeneous seed coating

Function

- Gravimetric seed dosing with seed flow controller
- Special supply pump and electronic flow measurement for exact dosing of liquid products
- Large-volume primary distribution with spraying disc (without nozzles) for fine distribution of liquid products
- Nylon brush auger for a gentle and effective mixture
- PLC control for automatic operation
- Adaptive control unit for an automatic adjustment of seed and chemical liquid
- Electronic determination and inspection of preprogrammed seed and chemical liquid quantities
- Visualization by touch panel display

Options

- Integrated cross stream aspirator to reduce rough and fine dust in raw product
- Up to three dosing units for liquid products (hose or auger pumps)
- Mixing tanks, conveying and weighing technique
- Documentation, network connection, printer, remote maintenance
- Licence for second control unit in switch room or office
- Flexible process adjustments (mechanical, electrical, programming) up to customers choice
