

Box drying

- Box drying plant in modular execution
- Individual customization to existing box sizes and necessary drying capacity
- Warm air heating by fossil (gas, oil) or regenerative (wood chips, wood pellets, waste heat, solar, ...) energy sources
- Individual regulation of warm air temperature, drying- and cooling time as well as air volume for each single module
- Unlimited number of box lines and their length
- 1, 2 or 3 box lines on top of each other possible
- Switchboard with visualisation and touch panel
- Control program memory for automatic operation
- Measuring of exhaust air humidity or exhaust air temperature for automatic operation
- Digital display for current temperature on each module
- Later extension of the plant possible
- No cement chutes or pits in the ground necessary
